# Installation Manual

## Minimum System Requirements

- 300MB of free disk space
- 50MB of RAM
- Intel 80486
- internet connection

## Implementation Requirements

- installation of faersDB module
  - installation of faersREST module
  - installation of Apache2.4 server with PHP and cURL extensions
    - RECOMMENDED VERSION
      - Apache 2.4.25
      - PHP 5.6.30 (VC11 X86 32bit thread safe) + PEAR
- (Functionality is not guaranteed if using other versions.)

## Installation

1. Unzip faersUI.zip module compressed file.
2. Move all containing files to htdocs folder of your Apache server installation, or appropriate folder of your server.
3. Edit configUI.php file according to full server path of your installation of faersREST module.  
(Example: \$pathREST = "http://localhost:8080/faersREST/webapi/";)
4. Access your Apache server address.  
(Example: http://localhost:8888)

# User Manual

## Starting Service

1. Open your preferred internet browser.
2. Enter url of your faersUI module according to your faersUI installation.

## Using Service

1. Test of connection between all modules will be executed.
  - a. If unsuccessful user will be informed by message.
  - b. If successful user will have option to continue by clicking on Continue to application link.
2. User then enters search parameters of his choosing to appropriate input fields and click Search button.
3. When correct parameters were entered, list of all drugs loaded to system, that fulfil entered search parameters will be shown.
4. After choosing wanted drug by clicking on its brand name, user will be redirected to new page listing all recorded side effects of selected drug, that were loaded to system.
5. On page with side effects of selected drug, user have option to filter side effect by date when they were reported by entering desired date and clicking Filter button.
